EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicant's representative Daniel Roberts on 01/14/2011.

The application has been amended as follows:

In claim 47: line 3: -, by a playback device,- has been added after "sequentially presenting".

In claim 55: line 1: -including a processor- has been added after "computing device".

In claims 57-65: "55" has been replaced with -56-.

In claim 66: line 1: -non-transitory- has been added before "recording medium".

In claims 67-75: "65" has been replaced with -66-.

In claims 77-85: "75" has been replaced with -76-.

In claim 92: line 1: -non-transitory- has been added before "recording medium".

In claims 93-94: line 1: "method" has been replaced with -audiovisual product-.

The following is an examiner's statement of reasons for allowance:

Claim 47 recites, "providing a random number based at least in part on the seed component wherein as a user initiated point of interruption will vary from one sequence presentation to another, the varying point of interruption to receive the seed component insures a random number as the random number is derived from the sum of a predetermined value and the seed value; and linking or jumping to a second video sequence identified by the navigational component," which are unique features not disclosed by prior art.

Claims 48-54 are allowed because they depend on claim 47 above.

Claim 56 is allowed for the same reason as discussed in claim 47 above.

Claims 57-65 are allowed because they depend on claim 56 above.

Claim 66 recites, "executable code which when executed by a playback device will present the first video sequence, and in response to a user initiated interruption during the presentation of a GOP structure receiving the seed component and navigation component, wherein as a user initiated point of interruption will vary from one sequence presentation to another, the varying point of interruption to receive the seed component insures a random number as the random number is derived from the sum of a predetermined value and the seed value the navigation component used by a navigation engine to link or jump to a determined second video sequence," which are unique features not disclosed by prior art.

Claims 67-75 are allowed because they depend on claim 66 above.

Claim 76 recites, "executable code which when executed by a DVD player will present the first video sequence, and in response to a user initiated interruption during

the presentation of a GOP structure, execute the respective command, the executed command providing a seed component having a seed value and a navigation component, wherein as a user initiated point of interruption will vary from one sequence presentation to another, the varying point of interruption to receive the seed component insures a random number as the random number is derived from the sum of a predetermined value and the seed value the navigation component used by a navigation engine to link or jump to a determined second video sequence," which are unique features not disclosed by prior art.

Claims 77-85 are allowed because they depend on claim 76 above.

Claim 86 recites, "providing a random number based at least in part on the value, the seed value of a first GOP structure of the first video sequence being different from the value of a second GOP structure of the first video sequence, wherein as a user initiated point of interruption will vary from one sequence presentation to another, the varying point of interruption to receive the seed value insures a random number as the random number is derived from the sum of a predetermined value and the seed value; and linking or jumping to a second video sequence identified by the navigational component," which are unique features not disclosed by prior art.

Claims 87-88 are allowed because they depend on claim 86 above.

Claims 89 recites, "providing a random number based at least in part on the seed value wherein as a user initiated point of interruption will vary from one sequence presentation to another, the varying point of interruption to receive the seed value insures a random number as the random number is derived from the sum of a

predetermined value and the seed value; and linking or jumping to a second video sequence identified by the navigational component, the seed component of a first GOP structure of the first video sequence being different from the seed component of a second GOP structure of the first video sequence," which are unique features not disclosed by prior art.

Claims 90-91 are allowed because they depend on claim 89 above.

Claim 92 recites, "executable code which when executed by a playback device will present the first video sequence, and in response to a user initiated interruption of the first video sequence during the presentation of a GOP structure receiving the seed component and navigation component, wherein as a user initiated point of interruption will vary from one sequence presentation to another, the varying point of interruption to receive the seed value insures a random number as the random number is derived from the sum of a predetermined value and the seed value, the navigation component being used by a navigation engine to link or jump to a determined second video sequence," which are unique features not disclosed by prior art.

Claims 93-94 are allowed because they depend on claim 92 above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
